Soumya KANJAN SAHOO
Roll no - 26

①

What is Rehabilitation? Write the Principles of Rehabilitation.

Ans.

Rehabilitation focuses on the existing capacity of the handicapped person and brings him on her to the optimum level to do functional activity by the combined and co-ordinated use of medical, educational and vocational measures.

- Rehabilitation should begin at the initial contact with the patient.
- Motivates the patient and help him to attain the social independence.

Principles of Rehabilitation :-

① Promote adaptation = The challenges that impairments and loss of function for the patient often create physical, social & immotional challenge. Adaptation may create more realistic suggestions to the individual to cope & make adjustments with attenuation that involve making life long changes.

② Emphasize abilities = Rehabilitation emphasizes on optimistic perspective for individuals who have undergone different health challenges based on life-long attenuating conditions. Therefore rehabilitation focuses not on what you lost but what can be regained and achieved through mutual goal-setting by the rehabilitation.
